

## Outline

Space allowance for masthead logo too narrow

Resources Module not in the CMS

Product Type filtration in Resource Module Listing

Speed issue - slower than MM dev site

Unintended styling capability differences new vs current site

PCA web form connection to Salesforce confirmation  
/contact web form - content + Salesforce connection

## Description

Already requested along the MM/VL review; current limitation to 200px width is too narrow to support our logos. Must be at least 350px.

I'm talking of the module to generate the lists like at <https://micromeasurements.vpg-dev.aws.vpcgw.com/knowledge-base/promotional-material>

As stated earlier MM, FS and BLHN require connection to Resource Space, brand specific docs. subdomain and this document module to list documents on web pages.

It's implemented for MM, but it's not for FS.

Please set up or document how to set it up on our end.

See filter for product type at <https://www.vpgforcesensors.com/documents/datasheets>

This is a taxonomy update to the given selectors on the MM page; we don't seem to be able to add that ourselves.

Require set-up or documentation of how to set up ourselves; It's driven by Ressource Space Product Type parameter.

Website speed is slow when clicking buttons front end and back end. Slower than live MM site.

Makes it hard to populate

The live site allows override of the CSS associated with the H tags. The new site allows some but not all aspects to be changed. I cannot change the H tag CSS alignment (left, center, right) I can't change the bold or not bold aspect.

Check and confirm; if not implement as on live FS site

<https://vpgforcesensors.vpg-dev.aws.vpcgw.com/contact> must meet <https://www.vpgforcesensors.com/contact> in regards of content and Salesforce Integration.

Either advise how to set this ourselves, or implement.
